

WHOLESALE NURSERY

Chaste Tree

Vitex Agnus-Castus

This small, ornamental tree shows clusters of lilac blooms, accented by gray-green compound foliage. It is multi-trunked and can be trained for use as a shrub border or a small accent tree. To control the shape and size, annual pruning is recommended. Vitex tolerates our hot Texas summers. The only needs are full sun and well-drained soil. Once established, you may never have to water again. During severe winters, these trees can freeze and die back to ground level. But they grow back quickly. The 'Shoal Creek' variety is a Teas Superstar selection. The Texas Department of Transportation recognizes its toughness, and plants Vitex in highway medians. It is a spectacular butterfly-attracting plant and is deer resistant.

Other Common Names: Lavender Trees, Vitex

AT A GLANCE	
Height	10'
Width	10'
Flower Color	Purple
Flower Season	Summer
Drought Tolerance	Moderate
Growth Rate	Fast
USDA Zone(s)	5 to 9
