Mediterranean Fan Palm

Chamerops humilis

The Mediterranean Fan Palm is one of the most successful palms for general use in landscaping. It performs well under a wide range of conditions. It has a broad spread, multiple trunks, and dark green foliage, making it an excellent accent tree. One of the most cold-hardy of all palms, the Med Fan can tolerate temperatures as low as zero degrees Fahrenheit. Med Fans also do well in hot, dry desert regions. Native to southern Europe, it is typically found in poor rocky soils. It is adaptable to a wide range of soils, provided they are well drained. This is a relatively slow growing palm, growing at a rate of six inches per year.

AT A GLANCE	
Height	6'-20'
Width	25'
Origin	Mediterranean
Water	Low
Growth Rate	Slow
Salt Tolerance	Moderate
USDA Zone(s)	8A - 11

Other Common Names: European Fan or Med Fan
